

Work Division Among Team Members

Team Size: 6 Members

Ahmed — Environment & GitHub Setup

- Create project structure and virtual environment.
- Configure GitHub repository and CI workflow.
- Ensure smooth collaboration workflow (branches, PRs).

Sama — Page Object Model (POM) Classes

- Design and implement HomePage, LoginPage, ProductPage, and CartPage.
- Ensure code reusability and maintainability.

Kotp — Test Scripts (Login)

- Develop test cases for successful and failed login using JSON data.
- Validate login error messages and authentication flow.

Sayed — Test Scripts (Product Search)

- Implement search validation for product names.
- Verify filtering and product visibility.

Omar — Test Scripts (Add to Cart)

- Implement add-to-cart test scripts.
- Validate that products appear correctly in the cart page.

Shaza — Documentation & Data Management

- Prepare test data files (JSON for users, CSV for products).
- Write and maintain the README and project documentation.
- Integrate scripts into the final working suite.
- Prepare HTML reports for final delivery.

Collaboration Plan:

- Each member works on a separate branch.
- Code is merged into the main branch only after review and successful CI checks.
- Weekly sync meeting to track progress and resolve issues.
